Class Room Lecture and Interactive learning:

The instructors utilize a blend of traditional teaching methods, such as chalk and board, along with modern audio-visual aids to deliver effective instruction. They actively foster student interaction, encouraging students to seek clarification and address doubts during lecture sessions. Beyond classroom teaching, students are motivated to participate in experiential learning, collaborative activities, and problem-solving exercises, enhancing their practical understanding and critical thinking skills.

Participative Learning: The Institute encourages the students to actively participate in various activities such as seminars, group discussions, projects, and skill-based add-on courses.

- Technical Symposium- This is organized every year by the students in which students from different colleges participate and learn from each other.
- Annual cultural program – This is organized every year for the students of the college to give a vent to their creativity.
- Student Seminars and workshops are conducted to improve their learning skills and Training classes are conducted to improve their communication skills.
- Presentation and publishing of papers in conferences and journals - The objective is to give them exposure to learn new skills.
- Guest Lectures are conducted by inviting eminent persons from Industry and Academics.
- Alumni students are invited for technical talk to share their wealth of experience and skills.
- Students are formed into group and assigned some Power point presentation, seminars and poster presentation on a specified topic.
- Placement training periods are allotted for higher semester students and they are trained by professional trainers to ensure them to be placed in good companies.
- Extensive awareness is created among the students about the openings in different public sector undertakings and the national Level examinations for Government services.

Activity based Learning:

The method of learning by doing activities is known as Activity-based Learning.

- Activity-based Learning allows students to personally engage in their own learning environment through meaningful experiences like problem solving and autonomous inquiry.
- This helps to empower students with problem-solving, logical thinking and imagination skills by enabling them to discover, practice and think better through Activity-based strategies.
- Activity-based Learning is a student centered approach in which the responsibility for learning is placed upon the student, often working in collaboration with classmates.

*Students of II year IT department learned to **Design Mobile App** during Club activity during 2023-24 Even*

Experiential Learning:

The following experiential learning practices are incorporated by the institute to boost the creativity and cognitive skills of the students.

- Projects: During the period of study in the 6th to 8th semester, many real time projects are given to the students and they are guided by both faculty and Research personnel.
- Many of the final year UG and PG projects are Industry based real time projects.
- Value-added Courses (Certification Courses) are conducted by market experts to develop their expertise.
- Students are taught advanced versions of Software like Oracle, MATLAB, PLC/SCADA, E TAP, etc. during their study.
- Participation in simulated events such as simulated stock exchanges or hackathons where they acquire experience of working on some real-life model.
- Laboratory Sessions are conducted with content beyond syllabus experiments
- Industrial Visits: Industrial Visits engage them in experiential learning while visiting the industry or organization.
- Internship: Students are encouraged to attend internship programs in industries to get hands-on training.
